

Vertical Ventilation™ Swine Facilities

Fresh Air Design – **Healthier Pigs** – Lower Energy Costs

AirWorks **Fresh Air** Environment

Tunnel Barn **Poor Air** Environment

State-of-the-art AirWorks Swine Facilities feature a patented Vertical Ventilation™ system that creates a more healthful and consistent fresh air environment inside, ideal for healthy pig growth, and far superior to outdated tunnel barn designs.

Improved animal well-being and performance

- Improved pig health
- Fewer sick pigs
- Reduced need for antibiotic therapies
- Lower mortality rate
- Greater uniformity, maximizing pig value

Environmentally friendly, energy cost-saving

- Significant gains in efficiency
- Energy conservation
- Lower cost of production

Improved Worker Environment

- Safer workplace
- Fresher air for better breathing
- Fewer sick pigs to manage
- Improved worker morale

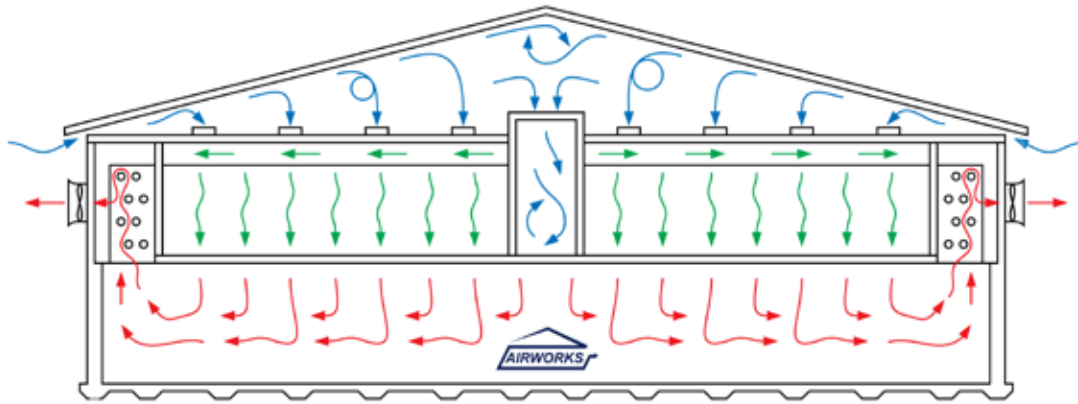

The time has passed for other production systems and their old technology. **AirWorks' 21st century technology** provides the best environments for your pigs and their caretakers. Better environments, better production and more profit.

AirWorks patented **Vertical Ventilation™** Design

The AirWorks Advantage:

- Greatly improved animal health and well-being, resulting in 7- to 15-day faster growth*
- Significantly improved born-alive, farrowing rates and farrowing intervals
- Reductions in overall morbidity and mortality
- Outstanding operational and energy efficiency
- Lower labor and maintenance requirements
- Lower overall cost of production by cutting operating costs and reducing production losses

Greatly improved animal health and well-being, resulting in **7- to 15-day faster growth***

AirWorks Swine Facilities pay for themselves

- Adds about 1 percent to per-pig construction cost
- Saves an average of 5 to 15 percent annually in reduced energy, labor and maintenance costs

*Growth rates based on averages. Actual results may vary and are dependent upon management style, genetics, climate, etc. For details, contact AirWorks.
